

Atty. Docket No. 569.005

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1-38. (Cancelled)

39. (New) A method for facilitating food service management in a health care facility, said method comprising the steps of:

providing a computer-based system;

establishing a standard set of therapeutic diet types contained in a master diet type database in said system;

storing a plurality of food recipes in said system within a recipe database;

obtaining nutritional data on each food item used in said plurality of recipes and storing said data in said system within a food item database;

evaluating a nutritional content of each food item;

verifying a nutritional value of each of said plurality of recipes in said recipe database;

assigning various food attributes to said recipes based upon said verified nutritional values;

Atty. Docket No. 569.005

shaping menu sets of said recipes for each of said established therapeutic diet types in a menu database in said system based upon said assigned food attributes;

providing a remote link to food service professionals associated with said healthcare facility to access said system;

collecting information from said registered food service professionals;

suggesting menu sets to said registered food service professionals based upon therapeutic diet types selected by said registered food service professionals;

making nutritional information associated with said menu sets available to said registered food service professionals; and

tracking an inventory of food items at said health care facility.

40. (New) The method of claim 39, further comprising the step of categorizing said plurality of recipes according to geographic regions having noticeable differences in food tastes.

41. (New) The method of claim 39, further comprising the step of eliminating variances in said therapeutic diet types among differing health care facilities.

42. (New) The method of claim 39, further comprising the step of evaluating diabetic exchange rates of each food item.

43. (New) The method of claim 42, wherein said verification of nutritional value of each of said plurality of recipes is based upon said evaluation of nutritional content and said evaluation of diabetic exchange rates of each food item.

Atty. Docket No. 569.005

44. (New) The method of claim 39, further comprising the step of forming a large library of menu sets in said menu database.

45. (New) The method of claim 44, further comprising the step of allowing said registered food service professionals to choose a set of menus from said library.

46. (New) The method of claim 39, further comprising the step of suggesting menu sets to said registered food service professionals based upon said inventory of food items at said healthcare facility.

47. (New) The method of claim 39, further comprising the step of suggesting menu sets to said registered food service professionals based upon an individual patient's preference.

48. (New) The method of claim 47, wherein said patient's preference is based upon said patient's particular food tastes.

49. (New) The method of claim 47, wherein said patient's preference is based upon said patient's religious beliefs.

50. (New) The method of claim 39, further comprising the step of storing said information collected from said registered food service professionals in said system in a user database.

51. (New) The method of claim 50, wherein said stored information in said user database includes identifying information.

Atty. Docket No. 569.005

52. (New) The method of claim 50, wherein said stored information in said user database includes historical information on prior use of said system by said registered food service professionals.

53. (New) The method of claim 39, further comprising the step of limiting access to said system to food service professionals associated with a healthcare facility.

54. (New) The method of claim 39, further comprising the step of authorizing at least one food service professional associated with a healthcare facility to receive information.

55. (New) The method of claim 39, further comprising the step of allowing said registered food service professionals to place food item orders via said system.

56. (New) The method of claim 55, further comprising the step of automatically updating said inventory to reflect said orders.

57. (New) The method of claim 55, wherein said registered food service professionals can place food item orders with a plurality of food item distributors.

58. (New) The method of claim 57, further comprising the step of providing a standard format for order transactions such that said registered food service professionals can make objective decisions about placing said orders.

59. (New) The method of claim 39, further comprising the step of providing said registered food service professionals the ability to interact with a system proprietor.

60. (New) The method of claim 39, further comprising the step of providing said registered food service professionals the ability to interact with other food service professionals associated with other healthcare facilities.

61. (New) The method of claim 39, further comprising the step of providing a search engine such that said registered food service professionals can search said databases.

62. (New) A system for facilitating food service management in a healthcare facility, said system comprising:

a data storage device comprising:

a master diet type database containing a standard set of therapeutic diet types;

a recipe database containing a plurality of food recipes;

a food item database containing nutritional data on each food item used in said plurality of recipes; and

a menu database containing menu sets shaped for each of said therapeutic diet types;

a computer-implemented arrangement for obtaining said nutritional data;

a computer-implemented arrangement for evaluating a nutritional content of each food item;

Atty. Docket No. 569.005

a computer-implemented arrangement for verifying a nutritional value of each of said plurality of recipes in said recipe database;

a computer-implemented arrangement for assigning various food attributes to said recipes based upon said verified nutritional values;

a computer-implemented arrangement for shaping said menu sets based upon said assigned food attributes of said recipes;

means for providing a remote link to food service professionals associated with said healthcare facility to access the system;

a computer-implemented arrangement for collecting information from said registered food service professionals;

a computer-implemented arrangement for suggesting menu sets to said registered food service professionals based upon therapeutic diet types selected by said registered food service professionals;

a computer-implemented arrangement for making nutritional information associated with said menu sets available to said registered food service professionals; and

a computer-implemented arrangement for tracking an inventory of food items at said healthcare facility.

63. (New) The system of claim 62, further comprising a computer-implemented arrangement for categorizing said plurality of recipes according to geographic regions having noticeable differences in food tastes.

64. (New) The system of claim 62, wherein said menu database contains a large library of completed menu sets.

65. (New) The system of claim 64, further comprising a computer-implemented arrangement for allowing said registered food service professionals to choose a set of menus from said library.

66. (New) The system of claim 62, further comprising a computer-implemented arrangement for suggesting menu sets to said registered food service professionals based upon said inventory of food items at said healthcare facility.

67. (New) The system of claim 62, further comprising a computer-implemented arrangement for suggesting menu sets to said registered food service professionals based upon an individual patient's preference.

68. (New) The system of claim 62, wherein said data storage device further comprises a user database containing information collected from said registered food service professionals.

69. (New) The system of claim 62, wherein access to the system is limited to food service professionals associated with a healthcare facility.

70. (New) The system of claim 62, further comprising a computer-implemented arrangement for authorizing at least one food service professional associated with a healthcare facility to receive information.

71. (New) The system of claim 62, further comprising a computer-implemented arrangement for processing food order transactions placed in the system by said registered food service professionals.

72. (New) The system of claim 71, further comprising a computer-implemented arrangement for automatically updating said inventory to reflect said food order transactions.

73. (New) The system of claim 71, wherein said registered food service professionals can place orders with a plurality of food item distributors.

74. (New) The system of claim 62, wherein said registered food service professionals are able to interact with a system proprietor or with other food service professionals associated with other healthcare facilities.

75. (New) The system of claim 62, further comprising a search engine adapted to allow said registered food service professionals to search said databases.

76. (New) A program storage device readable by machine for tangibly embodying a program of instructions executable by said machine to perform a method of facilitating food service management in a health care facility, said method comprising the steps of:

providing a computer-based system;

establishing a standard set of therapeutic diet types contained in a master diet type database in said system;

storing a plurality of food recipes in said system within a recipe database;

Atty. Docket No. 569.005

obtaining nutritional data on each food item used in said plurality of recipes and  
storing said data in said system within a food item database;

evaluating a nutritional content of each food item;

verifying a nutritional value of each of said plurality of recipes in said recipe  
database;

assigning various food attributes to said recipes based upon said verified  
nutritional values;

shaping menu sets of said recipes for each of said established therapeutic diet  
types in a menu database in said system based upon said assigned food attributes;

providing a remote link to food service professionals associated with said  
healthcare facility to access said system;

collecting information from said registered food service professionals;

suggesting menu sets to said registered food service professionals based upon  
therapeutic diet types selected by said registered food service professionals;

making nutritional information associated with said menu sets available to said  
registered food service professionals; and

tracking an inventory of food items at said health care facility.
